

Financial Planner

This project is a basic budget planning tool developed for my course. The main purpose is to help an individual understand how their monthly income can be divided into different spending categories, and then compare it with how they actually spend it.

Many people do not keep track of where their money goes each month, which leads to overspending (Real). This program gives a clearer picture by showing recommendations vs the user's real spending.

What The Program Does

The program:

- 1. Asks the user for their monthly income*
- 2. Calculates suggested amounts for each category based on common budgeting guidelines*
- 3. Asks the user how much they actually spend in each category*
- 4. Compares the suggested and actual values*
- 5. Gives simple feedback about overspending or underspending*
- 6. Displays two pie charts:*
 - Ideal Budget Split*
 - Actual Spending*

Categories Used

The budget is divided into:

- Rent*
- Food & Drinks*
- Health*

- Insurance

- Savings & Investments

- Miscellaneous

Tools and Libraries

- Python

- matplotlib (pie charts)

How To Run

1. Install Python

2. Install matplotlib (if needed)

3. Run the script:

```
ravi @DaBaby MINGW64 ~/OneDrive/Desktop/Project (master)
$ C:/Users/ravi_/AppData/Local/Microsoft/windowsApps/python3.12.exe c:/Users/ravi_/OneDrive/Desktop/Project/app.py
---- Simple Budget Planner ----
Enter your monthly income: 100000

Now tell me what you actually spend so we can compare:
How much do you spend on Rent? ₹40000
How much do you spend on Food & Drinks? ₹14000
How much do you spend on Health? ₹4000
How much do you spend on Insurance? ₹7000
How much do you spend on Savings & Investments? ₹26000
How much do you spend on Miscellaneous? ₹18000

--- Opinion Time ---

You overspend on Rent. Maybe chill a bit there
Food & Drinks looks balanced 🍕
You spend pretty low on Health. Could increase it a bit here and there
Insurance looks balanced 🍕
You overspend on Savings & Investments. Maybe chill a bit there
You overspend on Miscellaneous. Maybe chill a bit there
```

Example Output

```
ravi_@DaBaby MINGW64 ~/OneDrive/Desktop/Project (master)
$ C:/Users/ravi_/AppData/Local/Microsoft/WindowsApps/python3.12.exe c:/Users/ravi_/OneDrive/Desktop/Project/app.py
---- Simple Budget Planner ----
Enter your monthly income: 100000

Now tell me what you actually spend so we can compare:
How much do you spend on Rent? ₹40000
How much do you spend on Food & Drinks? ₹14000
How much do you spend on Health? ₹4000
How much do you spend on Insurance? ₹7000
How much do you spend on Savings & Investments? ₹26000
How much do you spend on Miscellaneous? ₹18000

--- Opinion Time ---

You overspend on Rent. Maybe chill a bit there
Food & Drinks looks balanced 🍕
You spend pretty low on Health. Could increase it a bit here and there
Insurance looks balanced 🍕
You overspend on Savings & Investments. Maybe chill a bit there
You overspend on Miscellaneous. Maybe chill a bit there
```

Along with the pie charts for comparison:

#Conclusion

This project helped me understand how to apply budgeting concepts with programming. It also showed how data visualization can make financial information easier to understand.
